About:

Pediatric dentistry is a specialized field of dental treatment, revolving around the dental care needs of children. Dentists who specialize as pediatric dentists are called pedodontists. A good pedodontist has taken specialized classes and additional training beyond that of most regular or general dentists, in order to learn about the best treatment for pediatric or children's dental problems.

Services: Our featured services include preventative children's dentistry, oral hygiene and maintenance, fluoride treatment, management of growth and development and general anesthesia as well as emergency care. We strive to make our office a comfortable environment for your child's first visit and where your child can develop and maintain a beautiful, healthy smile for a lifetime.
